

Pure Line Farm Management Platform

The Pure Line Farm Management Platform is the central dashboard that ties all of Pure Line's products together into a single view of the farm.

Key features

The platform includes productivity KPI dashboards that track yield, water use, and efficiency over time. It provides sensor data tables that display readings from soil-moisture, climate, and greenhouse sensors in an organized, filterable format. It also generates automated reports summarizing farm performance for each season.

Onboarding and support

New farms can be onboarded quickly with help from the platform's support team, who can be reached for setup, training, and ongoing assistance. The support team guides growers through connecting sensors, configuring dashboards, and scheduling automated reports.
